

**Give Your
Loved Ones
Clearly Better
Water**

with the Krystal Klear
Whole House Water Conditioner

Every day your family uses water for bathing, drinking, dishwashing, cooking, laundry, etc. As long as it tastes and smells good, you probably don't think too much about the water you use, so you don't realize the "extras" you're getting with your water, such as chlorine and heavy metals.

The Krystal Klear AmpForce Whole House Water Conditioner can help keep your family more comfortable by providing fresher, cleaner great-tasting water throughout your house.

"The skin absorbs twice as much water during showers and baths, meaning more copper, lead and sodium are absorbed in addition to drinking water."

The AmpForce whole house mixed media filtration system solves many of the problems associated with hard water electronically, and does not use the chemical processes used by water softeners, which makes it safer and more cost effective. With the AmpForce, you don't need additional sodium or potassium chloride, two chemical contaminants known to cause health problems. Yet it preserves the all-important calcium and magnesium levels in your water simply by altering them.

How does AmpForce work? Using electronic impulses, it de-crystallizes hard water minerals, calcium and magnesium so that every faucet and shower in your home is a source of fresher, cleaner, great-tasting water. Plus, it will actually descale any existing plumbing build-up, preserving your pipes.

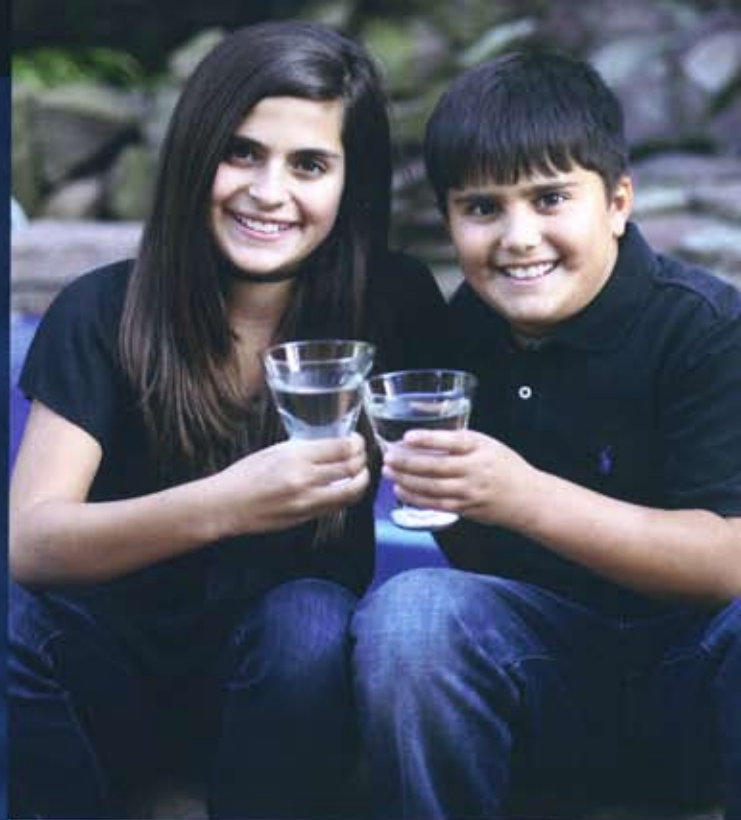

The benefits of the AmpForce Whole House Water Conditioner include:

- No cartridges or membranes to replace
- No brine discharge
- No sodium or potassium chlorides used
- No reverse osmosis system needed
- Easy to install
- Provides whole-house protection
- Adds life to all water-using appliances
- Saves your inside plumbing
- No-nonsense parts/labor warranty

Don't forget: the least expensive system is not always the best system. The total value includes the initial price, operating costs and longevity. The AmpForce provides exceptional value and safety for you and your family.

If you're interested in finding out more about how the Krystal Klear AmpForce Whole House Water Conditioner can provide fresher, cleaner, great-tasting water throughout your house, call us today at 877-SAFEH2O to schedule your no-obligation in-home demonstration.

"High amounts of sodium have been linked to high blood pressure and hypertension. Fatal heart attacks are more common in areas where water has been treated to remove calcium and magnesium."

Our Guarantee

Limited 5 Year No Nonsense Parts and Labor Guarantee

The manufacturing of the **Krystal Klear AmpForce** incorporates the highest standards of quality assurance, engineering expertise, and the highest quality materials. The **H₂O AmpForce** is TUV and GS approved and manufactured from DVGW tested parts. Each unit undergoes an extensive final inspection before shipment.

Did you know?

- According to the American Heart Association, *fatal* heart attacks are more common in areas where the water is naturally soft or has been treated to remove calcium & magnesium.
- They recommend that people on salt restricted diets avoid home water softeners that use sodium.
- Recent proposed legislation in California in the form of AB2270 will give the right to ban the purchase and use of water softeners to all California cities and towns.
- A 2001 statewide Texas regulation banned discharge of softened water into septic systems, a similar regulation in several Michigan communities bans brine discharge into the municipal sewage system.
- The National Cancer Institute says the risk factor in developing bladder cancer among people who *drink chlorinated water* range from 12 to 27 percent, with the risks escalating among smokers.
- According to Dr. Martin Fox's book, "Healthy Water for a Long Life", a person absorbs twice the amount of volatile chemicals from bathing or showering as compared to the percentage absorbed from drinking or ingestion.
- The mayors of many cities in the U.S. have banned together to stop purchasing "Bottled Water" for use in any municipal buildings mainly because of the harmful effects on our environment and the high cost of purchasing bottled water.
- Therefore it is preferred that all the water that enters your home go through a Whole House Water Conditioner.
